

BLACK BEAR IS NAMED IN THE 2018 GLOBAL CLEANTECH 100

List Recognizes the Top Private Companies in Clean Technology

[NEDERWEERT, THE NETHERLANDS]– January 23 2018: Black Bear Carbon is a pioneering circular-economy, technology-based company. Its patented technology facilitates the harvesting of carbon black from waste tires in a way that adds upcycled value. Carbon black is used as a pigment in plastics, inks and paints as well as a reinforcing agent in rubber and tires.

Black Bear Carbon, today announced that it was named in the prestigious [2018 Global Cleantech 100](#), produced by CTG ([Cleantech Group](#)), whose research and events services keep its audiences and clients in touch with emerging trends, leading innovation companies and all key players in sustainable innovation.

The Global Cleantech 100 represents the most innovative and promising ideas impacting the future of a wide range of industries, according to the players in the market. Featuring companies that are best positioned to solve tomorrow's clean technology challenges, the Global Cleantech 100 is a comprehensive list of private companies with the highest potential today to make significant market impact within a 5-10-year timeframe.

“We are pleased to be selected as a Global Cleantech 100 company. It is another validation of our current traction and builds on our recent announcement of the AkzoNobel partnership” says Martijn Lopes Cardozo, CEO of Black Bear

This list is collated by combining proprietary CTG research data, with weighted qualitative judgments from hundreds of nominations, and specific inputs from a global 86-person [Expert Panel](#). To qualify for the list, companies must be independent, for-profit, cleantech companies that are not listed on any major stock exchange.

This year, a record number of nominations were received: 12,300 distinct companies from 61 countries. These companies were weighted and scored to create a short list of 312 companies. Short-listed nominees were reviewed by CTG's Expert Panel, resulting in a finalized list of 100 companies from 18 countries.

The 86-member expert panel is drawn from leading financial investors and representatives of multinational corporations and industrials active in technology and innovation scouting across Asia, Europe, and North America. The composition of the expert panel broadly represents the global cleantech community, from pioneers and leaders to veterans and new entrants. The diversity of panellists results in a list of companies that command an expansive base of respect and support from many important players within the global cleantech innovation ecosystem.

“The ongoing mainstreaming of clean technology solutions and the rise in their strategic importance was evidenced by an unprecedented burst of recent M&A activity,” said Richard Youngman, CEO, CTG

(Cleantech Group). “For the first time, now in its 9th year, four of this year’s Global Cleantech 100 companies were acquired by multi-nationals between the striking of the final list (in September 2017) and its official release today (in January 2018). More will surely follow if this set of companies achieve even half of their anticipated impact.”

- The complete list of 100 companies was revealed on January 22nd at the 16th annual Cleantech Forum San Francisco: <https://i3connect.com/gct100/the-list>

About Cleantech Group

Founded in 2002, the mission of Cleantech Group (CTG) is to accelerate sustainable innovation. Our subscriptions, events and programs are all designed to help corporates, investors, and all players in the innovation ecosystem discover and connect with the key companies, trends, and people in the market. Our coverage is global, spans the entire clean technology theme and is relevant to the future of all industries. The company is headquartered in San Francisco, with a growing international presence in London.

Our parent company, Enovation Partners, one of *Consulting Magazine’s* 2017 Seven Small Jewels, is based in Chicago (learn more at www.enovationpartners.com).

About Black Bear

Black Bear Carbon is a pioneering circular-economy, technology-based company. Its patented technology facilitates the harvesting of carbon black from waste tires in a way that adds upcycled value. Carbon black is used as a pigment in plastics, inks and paints as well as a reinforcing agent in rubber and tires. Current manufacturers make carbon black by burning oil (the “furnace process”), emitting CO₂ and polluting the environment. Black Bear is dedicated to producing high-quality carbon blacks from end-of-life tires in a clean, sustainable way.
